

WHITMORE, Harold James

DOB: March 8, 1945 | Age: 67 yrs | Sex: Male | MRN: SMC-04471932

Encounter Date: March 20, 2012 | Provider: Raymond Foster, MD — Cardiology | Doc ID: SCA-2012-0320-FU

Cardiology Follow-up

Post-PCI Review (5 Weeks)

Subjective

Five weeks post LAD stenting. Angina fully resolved; walking 30 minutes daily without chest pain. Adherent to dual antiplatelet therapy. No bleeding, bruising, or dyspnea. Quit smoking 3 weeks ago (date 03/01/2012) using nicotine patches — first sustained quit attempt.

Vital Signs

BP (mmHg)	HR (bpm)	RR	Temp	SpO2	Weight	BMI
128/78	62	15	36.6 C	98% RA	93.2 kg	30.4

Echocardiogram (02/28/2012) — Results

LVEF 55% (normal). No regional wall motion abnormality at rest. Mild concentric LV hypertrophy. Grade I diastolic dysfunction. Trace mitral regurgitation. Normal right ventricular size and function.

Assessment

- CAD s/p drug-eluting stent to proximal LAD — clinically stable, angina-free.
- Smoking cessation — newly abstinent, strongly encouraged.
- HTN — at goal.
- Preserved LV systolic function.

Plan

- Continue DAPT through February 2013, then aspirin 81 mg indefinitely.
- Continue metoprolol, atorvastatin 80 mg, lisinopril.
- Completed cardiac rehab enrollment.
- Lipid panel ordered to confirm LDL target (goal <70). Follow-up 6 months or sooner.
