

WHITMORE, Harold James

DOB: March 8, 1945 | Age: 71 yrs | Sex: Male | MRN: SMC-04471932
Encounter Date: June 22, 2016 | Provider: Laura Simmons, MD — Emergency Medicine | Doc ID: SMC-2016-0622-ED

Emergency Department Visit

Palpitations & Dyspnea — New Atrial Fibrillation

Chief Complaint

Palpitations and breathlessness for ~6 hours.

HPI

71-year-old man with CAD, diabetes, treated prostate cancer presents with sudden palpitations, mild dyspnea, and lightheadedness while gardening. No chest pain, syncope, or focal neuro symptoms. No fever or cough.

Vital Signs

BP (mmHg)	HR (bpm)	RR	Temp	SpO2	Weight	BMI
148/92	142 irreg	20	36.8 C	95% RA	94.6 kg	30.8

ECG

Atrial fibrillation with rapid ventricular response, rate ~142 bpm. No acute ST elevation; old findings consistent with prior. QTc normal.

ED Labs

Test	Result	Units	Reference Range	Flag
Troponin I (0 h)	0.02	ng/mL	< 0.04	
Troponin I (3 h)	0.03	ng/mL	< 0.04	
TSH	1.8	mIU/L	0.4 - 4.0	
Potassium	4.4	mmol/L	3.5 - 5.1	
Magnesium	1.7	mg/dL	1.7 - 2.2	
Creatinine	1.3	mg/dL	0.7 - 1.3	H
eGFR (CKD-EPI)	58	mL/min/1.73 m2	> 60	L
BNP	210	pg/mL	< 100	H

ED Course

Rate controlled with IV metoprolol 5 mg x2, then transitioned to oral; ventricular rate settled to ~88 bpm, remained in AF. CHA2DS2-VASc score 4 (HTN, DM, age 65-74, vascular disease) — anticoagulation indicated. Started apixaban; dose reduced consideration given eGFR 58 and age — full dose 5 mg BID appropriate (only one reduction criterion). HAS-BLED discussed.

Diagnosis & Disposition

New-onset atrial fibrillation with RVR, now rate-controlled. Discharged home with cardiology follow-up. Note: eGFR now 58 indicates Stage 3a CKD — flag for PCP.

Medications Started/Changed

Medication	Dose	Route	Frequency	Indication
Apixaban	5 mg	PO	Twice daily	Stroke prevention in AF
Metoprolol succinate	100 mg	PO	Once daily (increased)	Rate control
