

WHITMORE, Harold James

DOB: March 8, 1945 | Age: 72 yrs | Sex: Male | MRN: SMC-04471932

Encounter Date: September 5, 2017 | Provider: Helen Cho, MD — Ophthalmology | Doc ID: EYE-2017-0905-OPH

Ophthalmology — Dilated Diabetic Eye Examination

Mild Non-Proliferative Diabetic Retinopathy Identified**Reason**

Diabetic retinal screening; reports occasional blurred vision, worse when glucose high.

Examination Findings

Visual acuity (corrected)	OD 20/30, OS 20/25
Intraocular pressure	OD 16 mmHg, OS 15 mmHg
Anterior segment	Early nuclear sclerotic cataracts, both eyes (visually mild)
Dilated fundus	Scattered microaneurysms and a few dot-blot hemorrhages, both eyes; no macular edema; no neovascularization

Assessment

1. Mild non-proliferative diabetic retinopathy (NPDR), both eyes — no center-involving macular edema.
2. Early age-related cataracts, both eyes — not yet visually significant.
3. Refractive blur correlating with glycemic fluctuation.

Plan

- Optimize glycemic and blood pressure control (communicated to PCP/endocrinology).
- No laser or injection indicated at this stage.
- OCT macula obtained — no edema.
- Repeat dilated exam in 12 months; sooner if vision worsens. Monitor cataract progression.
