

WHITMORE, Harold James

DOB: March 8, 1945 | Age: 75 yrs | Sex: Male | MRN: SMC-04471932

Encounter Date: October 14, 2020 | Provider: David Mercer, MD — Orthopaedic Surgery | Doc ID: SMC-2020-1014-ORTHO

Orthopaedic Follow-up

Post Right Total Knee Arthroplasty — 4 Weeks**Subjective**

Four weeks post right TKA. Pain well controlled, off opioids (acetaminophen only). Ambulating with a cane; participating in home physiotherapy. Wound healed. No fevers, calf pain, or swelling to suggest infection or DVT.

Examination

Right knee: incision well-healed, no erythema or drainage. Range of motion 0-105 degrees (improving). Stable to varus/valgus stress. No effusion. Distal neurovascular status intact.

Imaging (10/14/2020)

Right knee radiographs: TKA components well-seated and aligned; no loosening, lucency, or periprosthetic fracture.

Assessment & Plan

Satisfactory recovery from right TKA. Continue physiotherapy targeting flexion ≥ 120 degrees and quadriceps strength. Transition from cane as tolerated. Continue apixaban for AF (also covers residual VTE risk). Routine follow-up in 6 weeks; left knee may require arthroplasty in future — monitor symptoms.
