DOB: March 8, 1945 | Age: 72 yrs | Sex: Male | MRN: SMC-04471932

Encounter Date: October 19, 2017 | Provider: Peter Grant, MD — Radiology | Doc ID: LIV-2017-1019-XR

Diagnostic Imaging Report

Bilateral Knee Radiographs — Osteoarthritis**Examination**

Study	Radiographs, both knees — AP weight-bearing, lateral, sunrise views
Indication	Bilateral knee pain and stiffness; rule out osteoarthritis
Comparison	None available

Findings

Both knees: moderate medial compartment joint-space narrowing, right greater than left. Subchondral sclerosis and marginal osteophytes at the medial femoral condyles and tibial plateaus. Mild patellofemoral compartment narrowing with osteophytes. No acute fracture or dislocation. No significant effusion. Vascular calcification of the popliteal arteries noted.

Impression

- Moderate bilateral tricompartmental osteoarthritis, right knee more advanced (Kellgren-Lawrence grade 3 right, grade 2 left).
- Incidental popliteal arterial calcification — consistent with known vascular disease.

Recommend clinical correlation and conservative management; orthopedic referral if refractory.
