

WHITMORE, Harold James

DOB: March 8, 1945 | Age: 76 yrs | Sex: Male | MRN: SMC-04471932

Encounter Date: March 5, 2022 | Provider: Nadia Ellis, MD — Pathology | Doc ID: SMC-2022-0305-PATH

Surgical Pathology Report — Final

Colon Polyps, Polypectomy (Specimens of 02/28/2022)**Specimen**

Accession	S22-006531
Collected / Reported	February 28, 2022 / March 5, 2022
Submitting Provider	Brian Holt, MD (Gastroenterology)
Specimens	A: Sigmoid polyp (8 mm); B: Descending colon polyp (6 mm); C: Antral biopsies

Final Diagnosis

- A. COLON, SIGMOID, POLYPECTOMY: Tubular adenoma. No high-grade dysplasia. Margins free.
- B. COLON, DESCENDING, POLYPECTOMY: Tubular adenoma with low-grade dysplasia. Completely excised.
- C. STOMACH, ANTRUM, BIOPSY: Chronic gastritis; Helicobacter pylori not identified on immunostain. No intestinal metaplasia or malignancy.

Comment

Two tubular adenomas, benign, completely removed. No malignancy. Per surveillance guidelines (2 small adenomas), recommend repeat colonoscopy in 7-10 years (individualize for comorbidity/anticoagulation). Electronically signed, Anatomic Pathology.
