

WHITMORE, Harold James

DOB: March 8, 1945 | Age: 78 yrs | Sex: Male | MRN: SMC-04471932

Encounter Date: March 7, 2024 | Provider: Raymond Foster, MD — Cardiology | Doc ID: SCA-2024-0307-HF

Cardiology Follow-up

Progressive HFrEF (EF 30%) — ICD Evaluation & Echo Review

Subjective

79-year-old with chronic HFrEF, AF, CAD, CKD. Reports NYHA Class II-III symptoms: dyspnea on one flight of stairs, mild ankle swelling controlled with diuretic. No syncope or sustained palpitations. Adherent to guideline-directed therapy at maximally tolerated doses (renal function and BP limit further up-titration).

Vital Signs

BP (mmHg)	HR (bpm)	RR	Temp	SpO2	Weight	BMI
112/68	68 irreg	16	97% RA	97% RA	92.5 kg	30.2

Echocardiogram (02/28/2024) — Results

LVEF 30% (declined from 35% in 2018, 38% in 2020). Global hypokinesis. Moderate-severe functional mitral regurgitation. LA dilated (4.8 cm). Moderate diastolic dysfunction. Estimated PASP 48 mmHg. RV mildly impaired.

Labs

Test	Result	Units	Reference Range	Flag
BNP	640	pg/mL	< 100	H
Creatinine	2.0	mg/dL	0.7 - 1.3	H
eGFR (CKD-EPI)	33	mL/min/1.73 m2	> 60	L
Potassium	4.9	mmol/L	3.5 - 5.1	
Hemoglobin	11.2	g/dL	13.5 - 17.5	L

Assessment

- Chronic HFrEF, now EF 30% despite GDMT — progressive. NYHA II-III.
- Functional mitral regurgitation, moderate-severe.
- AF, rate-controlled, anticoagulated.
- CKD stage 3b/4 limiting RAAS/MRA up-titration; hyperkalemia risk.
- Anemia (multifactorial) contributing to symptoms.

Plan

- Continue sacubitril/valsartan (renally tolerated dose), carvedilol, spironolactone (monitor K+ closely), empagliflozin, furosemide (adjust for congestion).
- EF ≤35% on optimal therapy with reasonable life expectancy → refer for primary-prevention ICD evaluation (electrophysiology) and assess candidacy considering comorbidity and goals of care.
- Discuss prognosis and advance care planning.
- Nephrology co-management for CKD/electrolytes; treat anemia (see nephrology).
- Close HF clinic follow-up; daily weights.

Current Heart-Failure Regimen

Medication	Dose	Route	Frequency	Indication
Sacubitril/valsartan	49/51 mg	PO	Twice daily	HFrEF
Carvedilol	12.5 mg	PO	Twice daily	HFrEF / rate control

WHITMORE, Harold James

DOB: March 8, 1945 | Age: 78 yrs | Sex: Male | MRN: SMC-04471932

Encounter Date: March 7, 2024 | Provider: Raymond Foster, MD — Cardiology | Doc ID: SCA-2024-0307-HF

Medication	Dose	Route	Frequency	Indication
Spironolactone	25 mg	PO	Once daily	HFrEF (monitor K+)
Empagliflozin	25 mg	PO	Once daily	HFrEF + T2DM + CKD
Furosemide	40 mg	PO	Once daily (titratable)	Congestion
Apixaban	5 mg	PO	Twice daily	AF
